

Séminaire de Chimie Théorique

Salle réunion groupe THEO 3ème Est, Bat. A12
Mardi 24 Octobre 2017 à 11:00h

Dr. Bastien Mussard

Department of Chemistry and Biochemistry
University of Colorado, Boulder, USA

Cheap and near exact calculations with large active spaces : New applications

I will present new features and applications of the semi-stochastic heat-bath configuration interaction (SHCI) algorithm[1], which allows near-exact calculations with large active spaces of systems of interest in biological processes and energy conversion and storage. In particular, the new CASSCF with large active space feature[2] and applications to relativistic effects[3] will be demonstrated.
